A LONG LIFE SOLAR PANEL FOR CANVAS AND BIMINI

TOUGH + CARBON 116W

The Tough+ Carbon 116W Quick Fix is a highly advanced panel, capable of transforming your sprayhood and bimini into efficient solar power generators. Mounting a large solar panel on a canvas surface has always been a challenge, mostly because of the lack of structural support will increase the risk of early panel failure.

By reinforcing the panel with carbon fiber, the Carbon model achieves the perfect strength to weight ratio needed to tackle this problem. It makes the panel not only stiff enough to support itself, but also light enough to protect the underlying canvas from damages. The soft transparent edges do not only protect the fabric from wear, but also provide a smooth color transition from any colored top to the uniform black panel surface.
